

FORECASTS YOU CAN BANK ON

Built for Precision and Certified Accurate

Solo delivers market-leading accuracy—supported by leading financial lender audits, industry certifications, and independent third-party validation.

BACKED BY OUR PARTNERS

The Solo Difference

- + DNV-Validated Forecasting**

DNV, a global leader in risk assessment, performed an independent audit of Solo's energy forecasts, which demonstrated 99.9% accuracy when reviewed against actual production data and across a comprehensive list of production-influencing elements, including loss factors, shading analysis, meteorological data, and our image and measurement processes.
- + Certified by Key Financial and Regulatory Platforms**

Solo proposals are trusted and accepted by major financiers such as GoodLeap and LightReach, as well as state programs that require high-certainty forecasting like NYSERDA and Energy Trust of Oregon.
- + Performance across the Board**

The breadth and depth of the study show that Solo performs reliably across climates, equipment types, utility zones, and even complex shading conditions, ensuring precision, not guesswork.

Why Accuracy Matters

- + Predictable Production Performance**

Predictable production performance helps eliminate business complaints that arise from underproducing residential systems.
- + Reliable Estimates = Fast Approvals**

Dependable estimates lead to swift lender and incentive approvals.
- + Superior Inputs = Smoother Installs**

Quality inputs remove roadblocks and streamline installs, boosting your conversion rates.
- + Proven Accuracy Builds Trust**

Verified accuracy builds trust with homeowners, allowing you to create a more effective selling environment.
